**INFORMED CONSENT FOR  
INVASIVE, DIAGNOSTIC,  
MEDICAL & SURGICAL  
PROCEDURES**

Chart No.

Name

Unit

(Patient Imprint Card)

**FORM B-1**

I hereby permit \_\_\_\_\_ (Name of Attending Physician or Authorized Health Care Provider) or his/her Associate Attending Physician of the same service, and assistants as may be selected and supervised by him/her to perform the following medical treatment, operation, or procedure (hereafter called the "procedure"):

Arterial Catheter

The procedure has been explained to me and I have been told the reasons why I need the procedure. The risks of the procedure have also been explained to me. In addition, I have been told that the procedure may not have the result that I expect. I have also been told about other possible treatments for my condition and what might happen if no treatment is received.

I understand that in addition to the risks described to me about this procedure there are risks that may occur with any surgical or medical procedure. I am aware that the practice of medicine and surgery is not an exact science, and that I have not been given any guarantees about the results of this procedure.

I have had enough time to discuss my condition and treatment with my health care providers and all of my questions have been answered to my satisfaction. I believe I have enough information to make an informed decision and I agree to have the procedure. If something unexpected happens and I need additional or different treatment(s) from the treatment I expect, I agree to accept any treatment which is necessary.

I agree to have transfusions of blood and other blood products that may be necessary along with the procedure I am having. The risks, benefits and alternatives have been explained to me and all of my questions have been answered to my satisfaction.

***If I refuse to have transfusions I will cross out and initial this section and sign a REFUSAL OF TREATMENT form.***

I agree to allow this facility to keep, use or properly dispose of, tissue and parts of organs that are removed during this procedure.

\_\_\_\_\_  
Signature of Patient or Parent/Legal Guardian of Minor Patient      \_\_\_\_\_ and \_\_\_\_\_ am pm  
Date      Time

If the patient cannot consent for him/herself, the signature of either the health care agent or legal guardian who is acting on behalf of the patient, or the patient's surrogate who is consenting to the treatment for the patient, must be obtained.

\_\_\_\_\_  
Signature of Health Care Agent/Legal Guardian      \_\_\_\_\_ and \_\_\_\_\_ am pm  
(Place a copy of the authorizing document in the medical record)      Date      Time

\_\_\_\_\_  
Signature and Relation of Surrogate      \_\_\_\_\_ and \_\_\_\_\_ am pm  
Date      Time

**WITNESS:**

I, \_\_\_\_\_ am a staff member who is not the patient's physician or authorized health care provider and I have witnessed the patient or other appropriate person voluntarily sign this form.

\_\_\_\_\_  
Signature and Title of Witness      \_\_\_\_\_ and \_\_\_\_\_ am pm  
Date      Time

**INTERPRETER/TRANSLATOR:** (To be signed by the interpreter/translator if the patient required such assistance)

To the best of my knowledge the patient understood what was interpreted/translated and voluntarily signed this form.

## **INFORMED CONSENT PROGRESS NOTE**

**(The Informed Consent Form HHC 100 B-1  
on the reverse side must also be completed)**

I explained the risks, benefits, side effects and alternatives of the Arterial Catheter (Identify Procedure) to the above-named patient for treatment of \_\_\_\_\_ (Identify Diagnosis).

As I explained to the patient, the risks, benefits, side effects, alternatives, intended goals and likelihood of success of the procedure to achieving health care goals (including potential problems with recuperation) include but are not limited to:

Risks and side effects of the proposed care: -Arterial Puncture -Bleeding -Hematoma Formation  
-Wire Migration -Nerve Injury -Thrombosis -Lack of blood flow past the catheter if clotted

Benefits: -Ability to directly and most accurately measure blood pressure on a second-by-second basis -Ability to safely obtain blood for analysis without multiple cannulations  
-Ability to most accurately titrate vasopressor medications

Alternatives (including risks, side effects and benefits): -Manual blood pressure cuffs - this is an indirect method of obtaining blood pressure that avoids the risks listed above, but may not be as accurate as the catheter

Risks related to not receiving the procedure: -Inability to most accurately assess blood pressure in a period of critical illness  
-Inability to most accurately titrate vasopressor medications

I provided the above-named patient with the opportunity to ask questions. I have answered the questions asked and it is my professional opinion that the patient understands what I have explained.

Print Name and Identification Number

**IF SOMEONE IS MAKING HEALTH CARE DECISIONS FOR THE PATIENT, THE ATTENDING PHYSICIAN MUST CERTIFY THAT THE PATIENT LACKS DECISIONAL CAPACITY.**

### ATTENDING PHYSICIAN'S CERTIFICATION

I have examined the above-named patient and it is my professional medical opinion that this patient lacks decisional capacity to make informed health care decisions. I understand that if this patient has appointed a health care agent to make these decisions, a copy of the patient's Health Care Proxy must be inserted in the medical record. If the patient's surrogate has consented to the proposed treatment for the patient, the surrogate has signed the consent form.
